EDUCATION

Pune Institute of Computer Technology — Pune, Maharashtra
B.E. in Electronics and Telecommunication | CGPA: **8.56** — 2023 – Present

PROFESSIONAL EXPERIENCE

Intern
Pune Institute of Computer Technology, Pune — Feb 2026 – April 2026

- Processed multi-source COVID-19 datasets using Python, Pandas and Tableau, performing data cleaning, transformation, validation, and exploratory analysis.
- Developed interactive Tableau dashboards with dynamic filtering, cross-filtering, and geospatial visualizations using Mapbox for state and district level analysis.
- Performed descriptive and correlational analysis to identify regional hotspots, demographic trends, testing bias, and relationships between testing infrastructure and reported cases.

PROJECTS

AlgoTradeSim : Trading Strategy Backtesting Platform
React.js, Node.js, Express.js, MongoDB, Redis

- Built a full stack trading strategy backtesting platform to execute and evaluate user defined strategies on historical market data from Yahoo Finance API.
- Implemented a strategy execution engine for conditional trading strategies written in DSL using lexing, parsing, and AST based interpretation.
- Integrated the Gemini API to translate natural language trading strategies into executable DSL code for backtesting.
- Implemented a two-level caching architecture using in-memory and Redis to reduce repeated external API calls and improve historical market data retrieval.

Pharmaceutical Inventory Management System
React.js, Node.js, Express.js, MySQL, Python, Chart.js

- Built a full stack pharmaceutical inventory management system with REST APIs for CRUD operations on medicine inventory and stock records, with MySQL for data storage.
- Integrated cascading machine learning models for monthly sales forecasting and medicine category demand prediction.
- Implemented a scheduled backend job to compare predicted demand against inventory levels and generate stock alerts, with alert records persisted in MongoDB.

Placement Data Portal
React.js, Node.js, Express.js, MySQL

- Developed a placement monitoring portal with a read only web interface and LLM driven workflows for placement data manipulation.
- Implemented REST APIs for querying, filtering, and aggregating placement data, with controlled read access for the frontend.
- Integrated a custom MCP connector with an LLM workflow to convert natural language updates into structured data and update the database.

TECHNICAL SKILLS

Languages: C++, SQL, JavaScript, Python
Web Technologies: React.js, Node.js, Express.js, REST APIs
Databases: MySQL, MongoDB
Tools: Git/GitHub, Postman, Tableau
Coursework: OOP, DBMS, OS, CN

ACHIEVEMENT

NTSE Scholar (National Talent Search Examination 2021): State Rank 17
