## EDUCATION

**Pune Institute of Computer Technology**

B.E. in Electronics and Telecommunication; CGPA: 8.56

Pune, Maharashtra

2023 – Present

## PROFESSIONAL EXPERIENCE

**Pune Institute of Computer Technology, Pune**

Data Analyst Intern

Feb 2026 – April 2026

- Analyzed and processed multi-source COVID-19 datasets using Python by performing data cleaning, preprocessing, normalization, feature engineering, and exploratory data analysis (EDA), improving data quality and uncovering actionable insights for downstream reporting and visualization.
- Developed interactive Tableau dashboards with dynamic filtering and drill-down capabilities, improving stakeholder access to real-time analytical insights.
- Performed statistical and exploratory analysis to identify regional hotspots, demographic trends, testing bias, and correlations between testing infrastructure and reported cases, generating actionable insights to support evidence-based decision-making.
- Integrated geospatial datasets to build state-wise and district-wise visualizations, enabling location-based analysis, outbreak monitoring, and trend identification through interactive dashboards that helped stakeholders make data-driven decisions.

## PROJECTS

**AlgoTradeSim Backtesting Platform**

React.js, Node.js, Express.js, MongoDB, C++, Redis

- Built a full-stack historical trading strategy backtesting platform that executes custom trading strategies on historical market data using the Yahoo Finance API.
- Designed and implemented a custom DSL parser in C++ for validating and executing user-defined trading logic.
- Integrated the Gemini API to translate natural language trading strategies into the custom DSL, enabling non-programmers to create and backtest strategies without writing code.
- Reduced repeated API calls using a two-level caching architecture using Redis, significantly improving historical data retrieval performance.
- Implemented portfolio performance analytics including Sharpe ratio, drawdown, cumulative returns, equity curves, and win-rate visualization.

**Pharmaceutical Inventory Management System**

React.js, Node.js, Express.js, MySQL, Python, Chart.js

- Built a Pharmaceutical Inventory Management System to centralize medicine inventory, stock records, and transaction management, improving inventory visibility and operational efficiency.
- Integrated machine learning models for monthly sales forecasting and medicine category demand prediction, enabling accurate estimation of inventory quantities required for each medicine category and supporting demand-driven inventory planning.
- Implemented inventory alerts using demand forecasting outputs, helping pharmacies maintain optimal stock levels while reducing shortages and excess inventory.
- Designed interactive business dashboards to monitor inventory valuation, stock movement trends, forecasted demand, and key business KPIs, empowering stakeholders to make informed, data-driven inventory decisions.

## TECHNICAL SKILLS

**Programming:** JavaScript, C++, Python, SQL, HTML, CSS,

**Technologies:** React.js, Node.js, Express.js

**Databases:** MySQL, MongoDB, Redis

**Tools:** Postman, Git/GitHub, Cursor, Tableau, Docker

**Coursework:** DBMS, OOP, DSA, Computer Networks, Data Analysis, Machine Learning,

## ACHIEVEMENT

NTSE Scholar (National Talent Search Examination 2021): State Rank 17
